

CUSTOM OPERATIONAL SOFTWARE

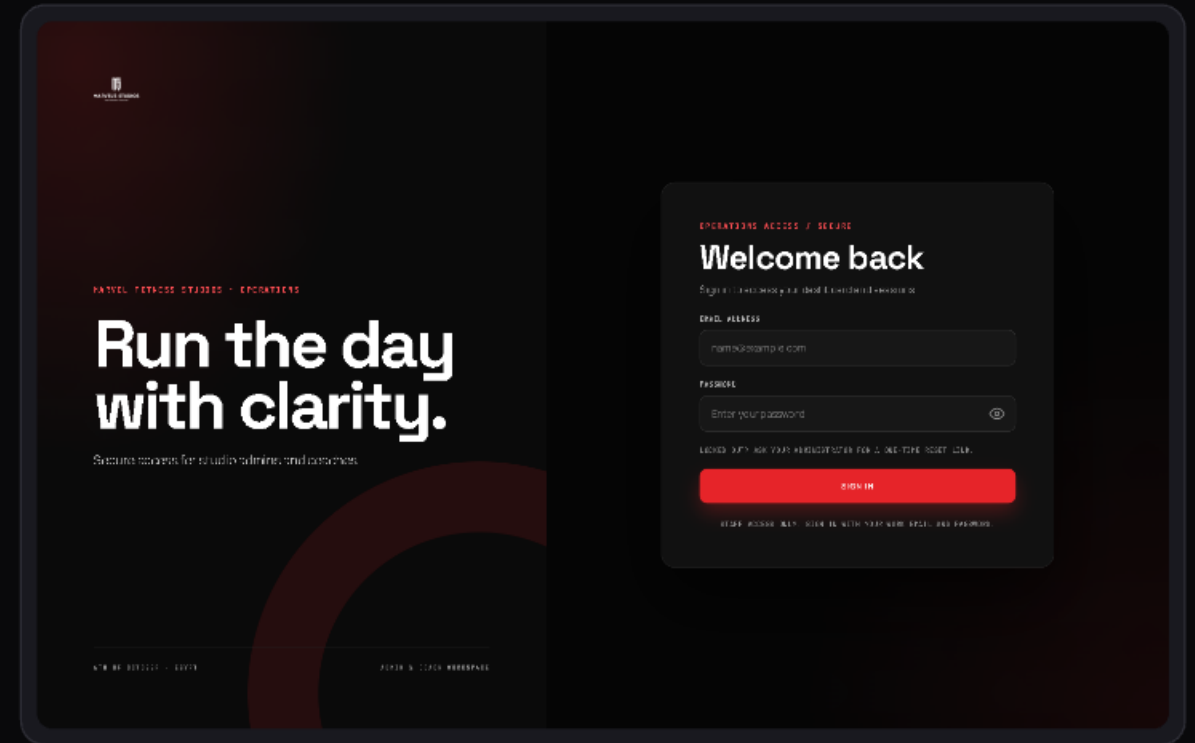

MARVEL FIT STUDIOS

Fitness Studio Management System

A custom web-based platform for running clients, coaches, programs, schedules, attendance, subscriptions, payments, and reporting.

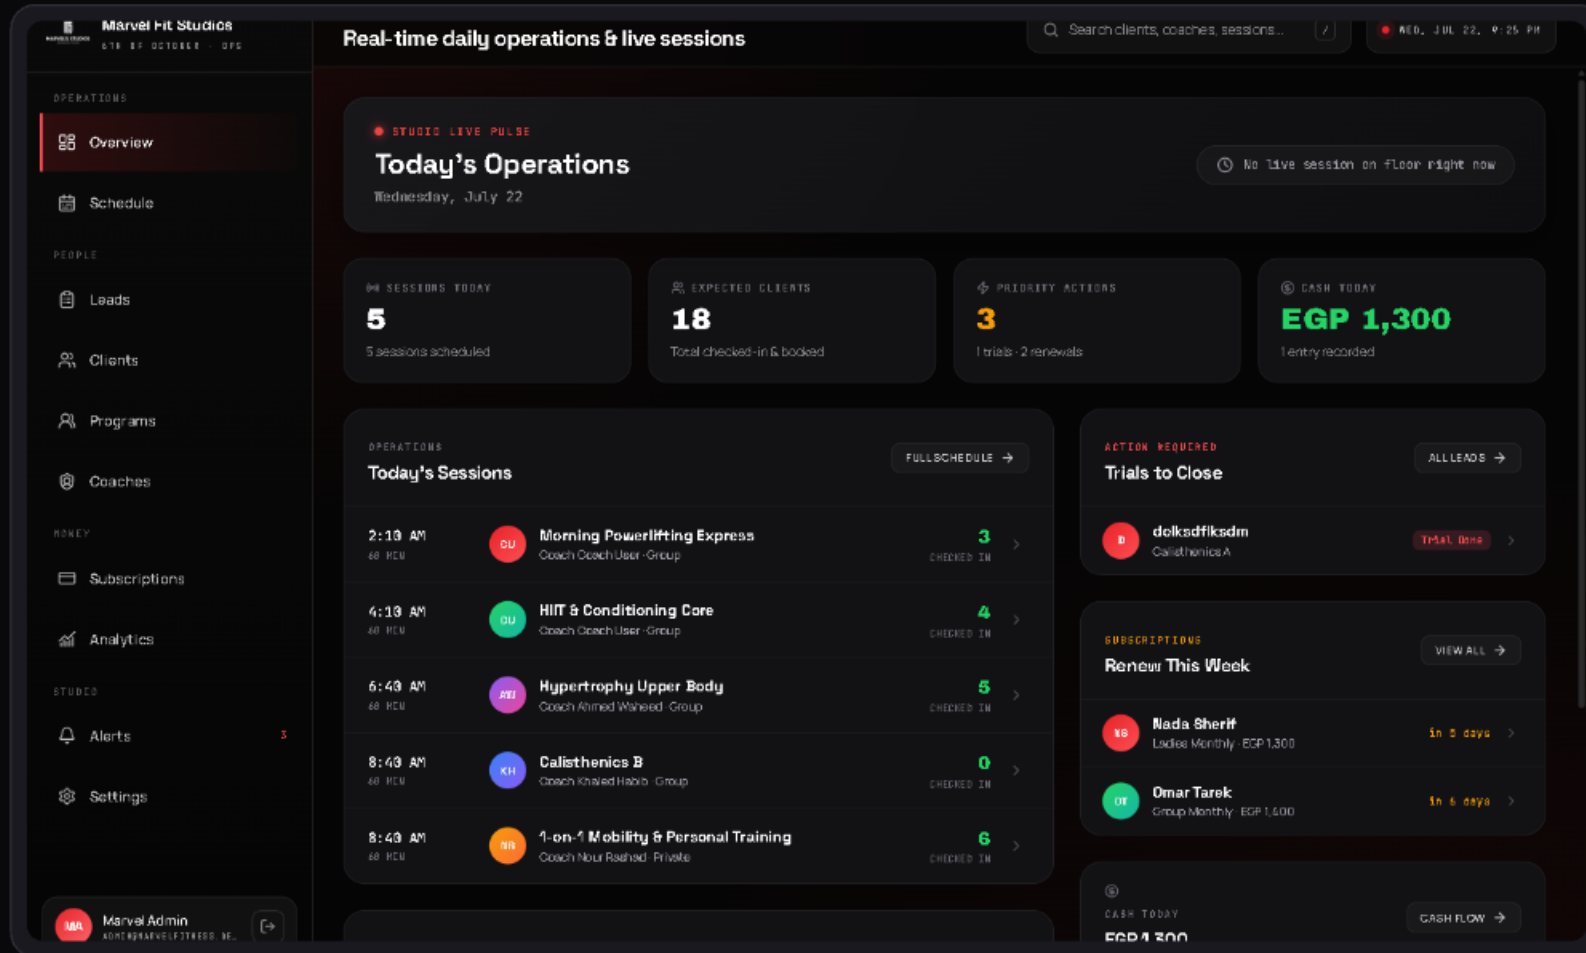

ADMIN + COACH WORKSPACES

System overview · July 2026

One operational workspace replaces a patchwork of tools

The application centralizes daily studio activity inside role-based, searchable workflows.

- Clients, injuries and assigned coaches
- Programs, groups and recurring sessions
- Attendance and daily floor activity
- Subscriptions, payments and receipts
- Cash flow, analytics and CSV exports

More than a website

It coordinates people, money, schedules and business rules against a relational data model.

Follow-up becomes a controlled workflow, not scattered messages

Lead stages, trial assignments and conversion actions stay visible to the studio team.

WITHOUT A SYSTEM

- Separate spreadsheets for prospects and clients
- Attendance remembered after the session
- Renewals calculated manually
- Injury context buried in messages

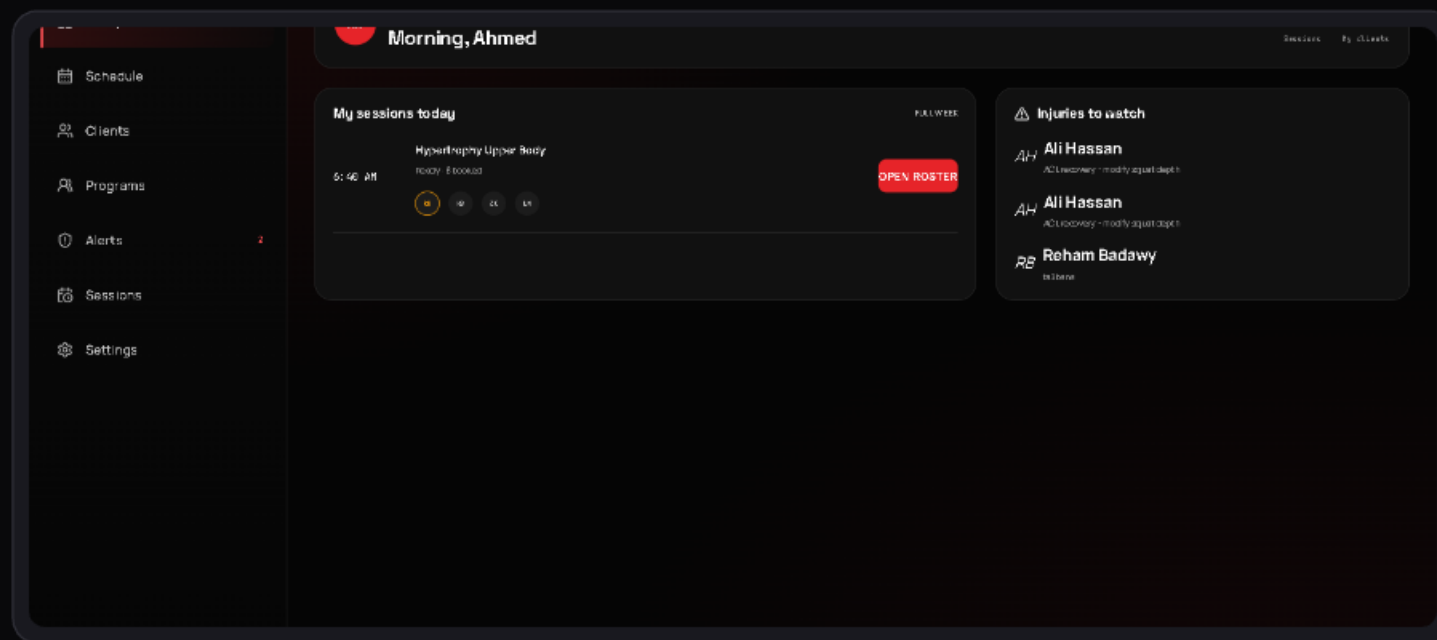

WITH MARVEL OPS

- Central records and stage ownership
- Searchable history and operational dashboards

The screenshot displays the 'Marvel Ops' dashboard for 'Marvel Fit Studios'. The main section is titled 'Prospect follow-ups & trial session conversion'. It features a top navigation bar with a search bar and a date/time indicator. Below this, there are four key metrics: 'TOTAL LEADS' (10), 'NEEDS ACTION' (0), 'CONVERSION RATE' (20%), and 'NEW LEADS' (0). A status bar shows counts for various stages: NEW (0), TRIAL BOOKED (1), TRIAL DONE (1), VIEW (2), and LOST (6). A table lists individual leads with columns for LEAD, SOURCE, PHONE, STAGE, CATEGORY, and ACTION. The table includes entries for 'awrbitower', 'dolkedfksd m', 'Farida Ashraf', 'Nour Hassan', 'abdoo', 'Hana Mahmoud', 'Rana Elad', 'Sherif Adel', 'vrljsentkjlwer', and 'Ziad sayed'. Each row has a corresponding action button like 'MARK TRIAL DONE', 'SUBSCRIBE', or 'LOST'. A sidebar on the left contains navigation links for OPERATIONS, PEOPLE, MONEY, and STUDIO.

Each staff role sees the work it owns

Authorization is enforced in routing and server-side session checks—not by an in-dashboard role switch.

ADMIN

Runs the studio: people, programs, schedule, subscriptions, cash flow, alerts and settings.

COACH

Works assigned sessions and clients, records attendance and notes, and reviews injury context.

CLIENT IDENTITY

Modeled for profiles, subscriptions, bookings and progress; operations remain staff-managed.

Client context connects directly to programs and coaching

Staff can move from the member list to program capacity and coach ownership without leaving the system.

Member profiles, injury alerts & cash-out ledger

Search clients, coaches, sessions... (7) | MON, JUL 22, 4:25 PM

Filters: All, Active, Total, Paused, Inactive, Injuries | + NEW CLIENT

CLIENT	CATEGORY	TYPE	COACH	STATUS	PHONE

Training categories, active group series & templates

Search clients, coaches, sessions... (7) | MON, JUL 22, 4:25 PM

Filters: All, Active, Paused | + New program

Programs

Check a program to manage its groups, coaches, members, and recurring sessions.

Filters: All, Active, Paused

Programs:

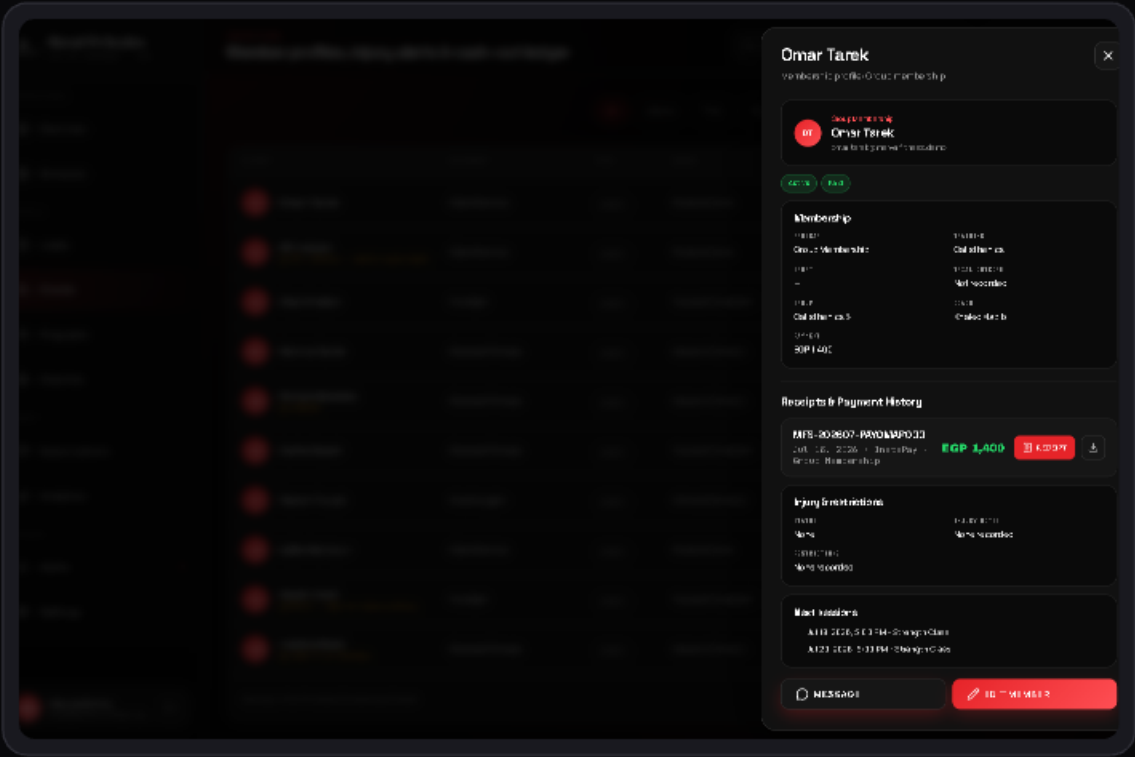

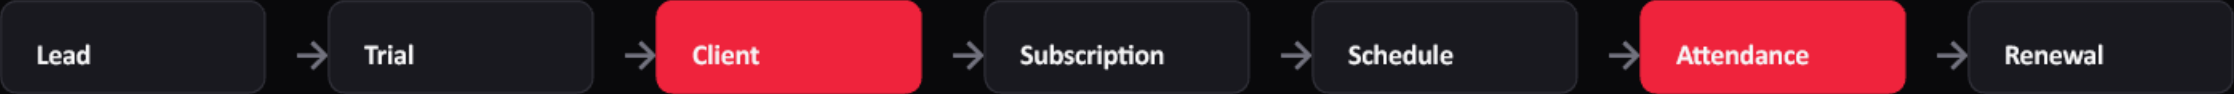

- Calisthenics A (Group)
- Calisthenics B (Group)
- Football (Group)
- General fitness (Group)
- Muscle gain (Group)

Details for Calisthenics A and Calisthenics B are shown below, including group information and coach assignments.

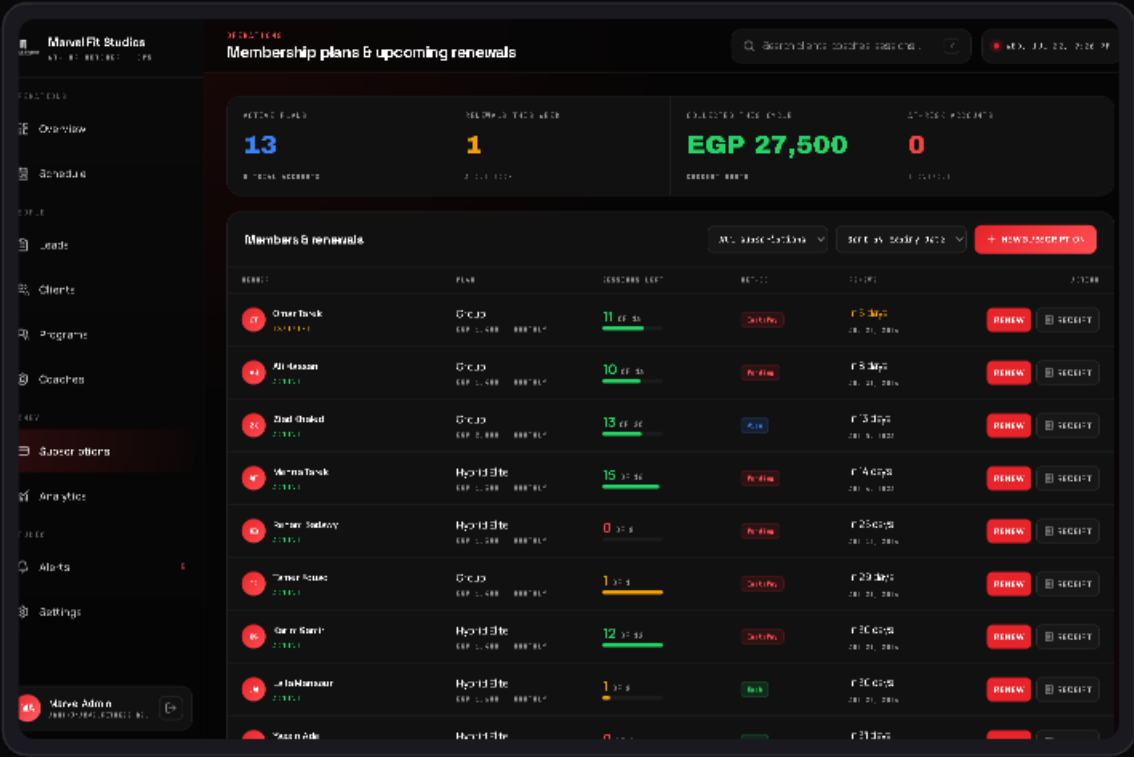

- Search, lifecycle filters and injury flags
- Coach and group assignment
- Group/private programs and active schedules

The system carries a member from trial to renewal

Business rules preserve the link between identity, program, subscription, payment, booking and attendance.

Profile + receipts + injury context

Pause · resume · cancel · renew

The daily schedule is also the attendance control center

Recurring series, private and group sessions, client rosters and change requests converge in one workflow.

The screenshot displays the 'STUDIO CALENDAR' interface. On the left is a sidebar with navigation options: OPERATIONS (Overview, Schedule), PEOPLE (Leads, Clients, Programs, Coaches), ROYEV (Subscriptions, Analytics), and STUDIO (Alerts, Settings). The main area is titled 'PROGRAM THE WEEK.' and includes a summary for 'THIS WEEK' with 15 sessions, 6 coach coverage, and 0 items needing attention. Below this is a calendar grid for the week of July 18-24, 2026. The Wednesday (July 22) session is highlighted, showing 3 sessions. At the bottom, there are buttons for 'ATTENDED' (green), 'LATE' (yellow), 'ABSENT' (red), and 'EXCUSED' (blue). A detailed view of the 'Morning Powerlifting Express' session on Wednesday, July 22, is shown at the bottom, indicating it is 'Ended' with 3/6 attendance recorded.

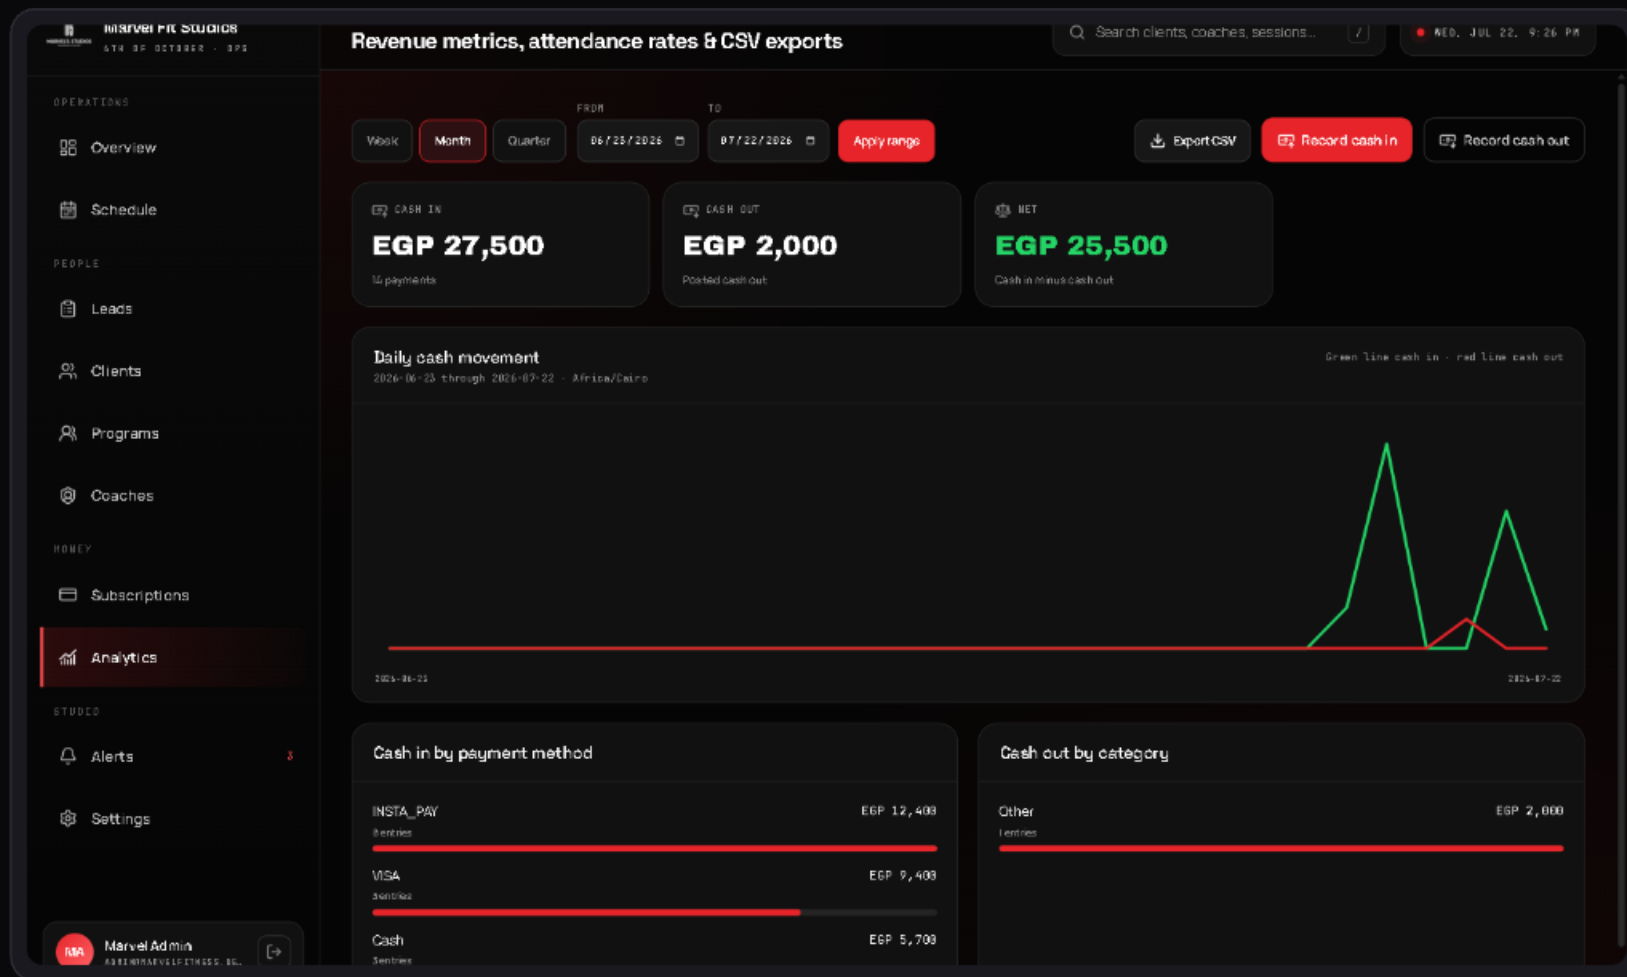

DAILY CONTROL LOOP

- Open the assigned session
- Review roster and injury context
- Record attendance state
- Add coaching notes
- Refresh remaining-session counts

Admins and coaches work from the same session record with role-appropriate controls.

Operations data becomes management evidence

The reporting workspace combines recorded income, auditable expenses, net movement and payment-method detail.

Cash in

Recorded client payments

Cash out

Categorized studio expenses

Net

Income minus posted expenses

CSV export supports external review without replacing the operational source of truth.

A full-stack application with a server-only data boundary

The UI is only the surface; authorization, transactions and persistence live behind controlled server layers.

STAFF BROWSER

Responsive React interface · Admin and Coach workspaces

NEXT.JS 16 APP ROUTER

Server Components · Server Actions · Route Handlers · Proxy authorization

APPLICATION LAYER

Role checks · Zod validation · repositories · automation · receipt/report generation

SUPABASE / POSTGRESQL

Relational schema · SQL migrations · RPC transactions · RLS · private storage

VERIFIED STACK

- TypeScript 5 · React 18
- Next.js 16.2 · Auth.js v5
- Supabase JS + PostgreSQL
- bcrypt password verification
- Radix UI · Lucide icons
- Vitest · Playwright · ESLint
- Vercel Analytics + cron config

Server-held secret access; RLS-enabled tables expose no browser-role data policies.

Substantial custom software—not a conventional website

Its value lies in the connected workflows and rules that support everyday studio decisions.

27

Server-action modules

70

Version-controlled SQL migrations

WHAT THE STUDIO GAINS

- One source of truth for people, sessions and money
- Less manual calculation and repeated data entry
- Faster exception handling for injuries, absences and renewals
- Role-specific accountability across admin and coaching work

BUSINESS-SPECIFIC DEPTH

Lead → trial → member conversion
Recurring and one-off scheduling
Attendance-driven session consumption
Subscription lifecycle and receipts
Cash-in / cash-out reporting
Injury-aware coaching context

A centralized operating system for the studio's daily work.
